

# MOVE network

---

MOVE Mobility AG

Enhance the appeal and added value of your location, and optimise the capacity of your infrastructure.

## Excellent reasons for MOVE network

The number of electric car drivers is rising steadily and consistently, and with this the demand for charging stations. These are preferably within easy reach and ideally should provide an incentive to make good use of the wait time.

You too can enhance the appeal of your business or location and create a positive customer experience by making the frequently complicated charging process more straightforward and enjoyable for drivers of electric vehicles. Integrate your charging station into the MOVE network – one of the best smart public charging networks in Switzerland. MOVE offers its thousands of customers and all other electric vehicle drivers in Switzerland a vast number of MOVE charging options as well as access to many more. These are complemented by countless charging options across all of Europe, and together with your location, the network is set to grow!

MOVE Mobility AG – the operator of one of the best public smart networks of charging stations – now offers property owners and facility managers a solution that meets the needs of the growing number of electric vehicle drivers.

## MOVE network services

### Accessible to all electric vehicle drivers

Integration into the MOVE public charging network  
 Can be activated via QR code, RFID fob or MOVE app  
 Can be activated via interchange (credit card)

### Automatic and transparent billing and remuneration for usage

Real-time payment overview via our B2B portal  
 Price transparency for users

### 24/7 hotline and free support

Remote monitoring and maintenance

### Station management via our B2B portal

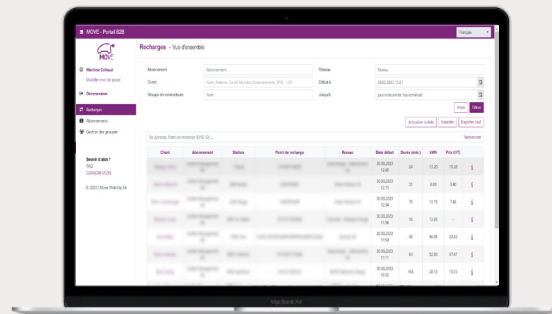

Stations displayed in the MOVE app  
 Stations displayed in other mobile applications linked to the public network

## B2B-Portal

The B2B portal is a web management portal that is specially created for owners of charging stations with a MOVE service. Using this portal, it is possible to independently oversee and manage a MOVE charging station network.

The primary functions include the display and simplified administration of remuneration tariffs. In addition, the portal offers owners the option of specifying separate contacts for each individual station for the purposes of billing and payments. It is also possible to access the invoice and credit note history.

The B2B portal allows, in addition to the basic functionalities, to activate access control on your stations which allows a MOVE user to start or not a session. The complete access management (card or RFID badge), that is to say the different MOVE subscriptions having the authorization to recharge, is also done directly via the portal.

Our business experts will be happy to provide you with specific information, billing details, additional cards or key tags in a personal meeting. Please contact us any time on (DE) 058 510 49 00 / (FR) 058 510 49 10 or via email at sales@move.ch.
